

ANTHONY MARIANI

P.E., PTOE, RSP1,
IMSA I, ENV SP

<https://www.linkedin.com/in/anthony-mariani-p-e-ptoe-rsp1-b231a564>

Anthony is an Assistant Project Manager for Colliers Engineering & Design in Hamilton, NJ with over 8 years of experience in the industry. He began his career as an intern with his current company (formerly Maser Consulting) while finishing his Bachelor's of Science Degree in Civil Engineering at The College of New Jersey (TCNJ). Anthony specializes in all aspects of transportation design and analysis, with a primary focus in traffic signals. He has overseen the design of a multitude of transportation related projects involving both public agencies and private clients, spanning across New Jersey as well as New York and Pennsylvania. Anthony takes pride in being a role model, mentor, and resource to younger engineers, helping them develop both their technical and soft skills, as he believes both are important to succeeding in the industry.

Anthony has always had a passion for transportation. After joining the industry, he found satisfaction in being able to provide a service which benefits the public in a positive way. Anthony is currently a resident of the Jersey Shore, so during the summer months he ditches the car for his beach cruiser in order to get around. From his experiences, he understands the shifting mobility trends of the public and their needs. He believes that in order to accommodate all roadway users, a greater focus is needed to provide better facilities for more than just motor vehicles along our roadways. Now more than ever, a deeper emphasis needs to be placed on increasing safety in transportation facilities for all users.

Anthony has been involved in ITE dating back to his college years. Prior to graduating, he was instrumental in starting the TCNJ ITE Student Chapter, which is still an active student chapter within the Met Section today. Because of his involvement with starting the TCNJ Student Chapter, Anthony was awarded the 2014 Dr. Louis J. Pignataro Memorial Transportation Education Award from the Met Section, which recognizes contributions towards the advancement of academics in transportation. He has served on several different Met Section committees including the Student Outreach Committee, the Younger Members Committee, and latest the Pignataro Award Committee. Beyond the Met Section, Anthony has served as the Northeastern District Student Outreach Chair and was a volunteer on the committee preparing the Bicycle Signals Resource Hub for ITE International. Anthony is also a graduate of the latest LeadershipITE Class of 2021 in which he learned invaluable knowledge related to leadership as it relates to the Transportation industry.

Anthony is passionate, hardworking, and a committed member of the Met Section. If given the opportunity, he looks forward to providing his upmost dedication to the ITE Metropolitan Section through the treasurer position and beyond. Since his time as an ITE Met Section Student member, attending his first meeting at Arthur's, and up through his years of involvement within the various committees, he has recognized the importance of student and younger member involvement and retention within the section as these individuals will

ultimately become the future leaders of the section. If elected, he plans to bring his expertise and insight from serving in these roles to the executive board, and ultimately the entire section, and to continue our history of having both a strong and rewarding section for all its members.
